## System requirements

PrintList Pro 4.7.1 requires 4D v2004 or higher (including 4D v11 SQL and v12).

## Fixed bug

Added a test for multiple instances of the same array (to prevent crashes in 4D v11 and above while sorting with *PL\_SetSort*).

## New feature

*PL\_Register* can now be called several times with different license keys. Registration will succeed if one or more keys are valid.
